

2011 State General Election

Legislative Assembly

The Distribution of Preferences shown below identifies the candidate who has won the election after a partial distribution of preferences.

Although a full distribution of preferences was not undertaken for this election, the final distribution of votes to the last two candidates in the count is as shown in the Two Candidate Preferred (TCP) count. The TCP count can be taken as a definitive distribution as the minor candidates have insufficient votes to change the TCP candidate selection.

Preferential Count explanation

The Preferential Count page displays a progressive count where a candidate with the fewest votes is eliminated and his/her ballot papers are distributed to the remaining candidates according to the next available preference shown on the ballot paper.

To be elected, a candidate must obtain more than $50\% + 1$ of the total formal votes in the count. First, all the number "1" votes are counted for each candidate. These are called First Preference Votes. If a candidate has more than half the total of First Preference Votes, that candidate is elected.

If no candidate has more than half of the first preferences, the candidate with the fewest votes is excluded. That candidate's votes are moved on to the other candidates according to the second preference (the 2's) shown by the voters on that candidate's ballot papers. Ballot papers which only show a first preference vote are excluded and are not considered as part of the count. This process progresses excluding the candidate with the fewest votes until one candidate has more than half the total votes remaining in the count and is declared elected.
